B) ECHO CLIENT - SERVER USING UDP

AIM :

To implement an Echo client server application using UDP sockets and verify communication between client & server

PROCEDURE

- Create a UDP Echo Server using datagram socket and packet
- Assign a port number to the UDP server
- Compile and execute the UDP server program
- Create a UDP Echo client using datagram socket
- Specify the server address & Port number
- The client sends message
- The server receiver message
- Enter bye to terminate the communication

RESULT :

Thus, the UDP Echo client-server application was successfully implemented and received echoed message from the server.

```
import java.io;
import java.net.*;
while (true){
DatagramPacket P = new DatagramPacket
                        (b, b.length), S.receive
                                        (P);
S.send(new Datagrampacket (r, r.length,
        D.getAddress(), D.getPort()))
    if (msg.equalsIgnoreCase("Bye"))break;}
s.close();}
}
```

UDPEchoclient.java

```
import java.net.*;
import java.io;
public class UDPEchoClient{
 public static void main (String[] args)
throws Exception {
   while (! msg = kb.readline()).equals
IgnoreCase ("bye")){
    S.send (new DatagramPacket (b, blength))
    S.receive (P);
    System.out.println (new string (P.getData())
}
S.close();
}
}
```
